

Certificate of Flame Resistance

Artificial Silk Fabric

The FR fabric described above has been treated with a flame retardant chemical such that the fabric meets the minimum requirements of flame resistance established by the following tests:

NFPA 701-2010, TM #1

Calif. Title 19, test # 1237.1 small scale

British BS 5867: Part 2: 1980

The flame retardancy has a minimum lifetime of at least one (1) year, but is likely to be effective for much longer. The flame retardancy will be removed by water washing. Wide fluctuations in atmospheric humidity as well as accumulations of airborne dust and oils will diminish the endurance and effectiveness of the flame retardant chemical.
